

Final Tableau Project – Bookstore Performance & Publisher Insights (Q1 2024)

1. Business Scenario

You are working as a Junior Data Analyst for a national bookstore group that sells books across several U.S. regions. Management has asked for a Q1 2024 performance review to understand which genres, regions and publishers are performing well, and to identify where to focus marketing and purchasing for Q2 2024.

Your task is to build a set of Tableau worksheets and dashboards, using the provided Bookstore data model, to answer the following business questions without creating any fields that do not exist in the datasets. All joins must follow the data model below.

2. Data Model (Given)

You have three data sources:

1. Bookstore_Monthly_Sales_2024_01.csv
2. Bookstore_Monthly_Sales_2024_02.csv
3. Bookstore_Monthly_Sales_2024_03.csv
4. Bookstore_Sales.csv
5. Publisher_Info.csv

The three monthly sales files must be UNIONED to create one Q1 2024 fact table. After the union, this table must be joined to the lookup / dimension-style tables using PublisherID.

Data model (text view):

Bookstore_Monthly_Sales_2024_(01–03)

↳ key: PublisherID

↳ join to: Publisher_Info.csv on PublisherID

↳ join to: Bookstore_Sales.csv on PublisherID

3. Available Fields (Only Use These)

From the monthly sales files (Jan–Mar 2024):

- OrderID
- OrderDate
- PublisherID

- Genre
- Quantity
- UnitPrice
- Sales
- State
- City
- Region

From Bookstore_Sales.csv:

- BookTitle
- Author
- Genre
- PublisherID
- Format
- Quantity
- UnitPrice
- Sales
- Cost
- Profit
- Country
- State
- City
- Region

From Publisher_Info.csv:

- PublisherID

- PublisherName
- FoundedYear
- EmployeeCount
- HQ_State
- HQ_City

Do not create or reference fields such as Customer Name, Discount, Category, Sub-Category, or Profit Ratio, because they are not present in the uploaded datasets.

4. Project Tasks

Complete the following tasks in order. Each task should be saved as a separate worksheet unless stated otherwise.

Task 1 – Prepare the Q1 2024 Data Source

6. 1. Import the three monthly sales files (Jan, Feb, Mar 2024) into Tableau.
7. 2. UNION them to create one table named: 2024 Monthly Sales Union.
8. 3. Join the unioned table to Publisher_Info.csv on PublisherID.
9. 4. Join the unioned table to Bookstore_Sales.csv on PublisherID.
10. 5. Verify that the fields OrderID, OrderDate, PublisherID, Genre, Quantity, UnitPrice, Sales, State, City, Region, PublisherName and HQ_State are all available in the final data source.

Task 2 – Q1 Sales by Genre (Core KPI View)

Goal: Identify which book genres generated the highest sales in Q1 2024.

- Steps:
 - • Create a bar chart.
 - • Columns: Genre
 - • Rows: SUM(Sales)
 - • Sort descending by Sales.
 - • Add Region to Colour to see how each region contributes to genre sales.

Task 3 – Regional Performance Overview

Goal: Compare sales performance across Regions to support Q2 regional targeting.

- Steps:
 - • Create a bar chart.

- Columns: Region
- Rows: SUM(Sales)
- Show filter for Genre so users can focus on one genre at a time.
- Optional: duplicate the sheet and show State instead of Region to get more detail.

Task 4 – Weekly Sales Trend (Time Analysis)

Goal: Show how sales changed week by week during Q1 2024.

- Steps:
 - Create a line chart.
 - Columns: OrderDate → change to Week(OrderDate) (continuous).
 - Rows: SUM(Sales).
 - Add Genre to Colour to compare genres over time.
 - Use Region as a filter, not as a column.

Task 5 – Publisher Performance (Partnership View)

Goal: Identify top and bottom performing publishers in Q1 2024.

- Steps:
 - Create a bar chart.
 - Columns: PublisherName (from Publisher_Info.csv).
 - Rows: SUM(Sales).
 - Sort descending.
 - Add Region to Filter to see where each publisher sells best.

Task 6 – Create Key Calculated Fields (Use Only Existing Fields)

Create the following calculated fields:

1. Avg. Sales per Order = $\text{SUM}([\text{Sales}]) / \text{COUNTD}([\text{OrderID}])$
2. Avg. Unit Price (Weighted) = $\text{SUM}([\text{Sales}]) / \text{SUM}([\text{Quantity}])$
3. Order Size = IF [Quantity] >= 5 THEN "Large (5+)" ELSEIF [Quantity] >= 3 THEN "Medium (3–4)" ELSE "Small (1–2)" END

Then:

- Build a bar chart: Columns: Region, Rows: Avg. Sales per Order.
- Build another bar chart: Columns: Order Size, Rows: SUM(Sales).

Task 7 – Highlight Table (Genre vs Region)

Goal: Spot strong/weak areas across the business quickly.

- Steps:
 - Rows: Region
 - Columns: Genre
 - Marks: Square
 - Colour: SUM(Sales)
 - Label: SUM(Sales)

Task 8 – Sales vs Quantity (Order-Level Scatter)

Goal: Find high-quantity or high-sales outlier orders.

- Steps:
 - Columns: Quantity
 - Rows: Sales
 - Detail: OrderID (so each dot is one order).
 - Colour: Genre.

Task 9 – Running Total for Q1 Sales Growth

Goal: Show how Q1 sales accumulated over time to support Q2 targets.

- Steps:
 - Build a line chart: OrderDate (Week) vs SUM(Sales).
 - Right-click SUM(Sales) → Quick Table Calculation → Running Total.
 - Add Region to Colour to compare cumulative growth by region.

Task 10 – Final Executive Dashboard

Goal: Present Q1 2024 Bookstore Performance in one view for management.

- Dashboard must include:
 - Sales by Genre (from Task 2)
 - Regional Performance (from Task 3)
 - Weekly Sales Trend or Running Total (from Task 4 or Task 9)
 - Publisher Performance (from Task 5)
- Add interactive filters for:
 - Region

- • Genre
- • PublisherName

5. Submission Requirements

- Power point presentation or PDF file
